*FOR IMMEDIATE RELEASE*

## ***AWT LAUNCHES THE JETZONE AND YOUR PROFITS ARE CLEARED FOR TAKEOFF***

The all-new American Jetzone™ SE forced-air graphics dryer is economical, efficient, and easy to use

Chicago — Expanding their comprehensive range of state-of-the-art drying and curing units and systems, Chicago-based AWT World Trade, Inc. is pleased to introduce the all-new American Jetzone™ SE electric forced-air graphics dryer.

The Jetzone SE is designed for efficient, high-performance curing of screen-printed graphics in a variety of production environments. Featuring a cost-effective forced-air system for use with wide range of inks and substrates and heavy-duty double wall chamber insulation to keep the dryer cool to the touch while minimizing heat loss, the energy-efficient design of the Jetzone SE keeps operating costs down.

Easy-to-use controls allow operators to adjust temperature, conveyor speed, and optional preheat and cooling functions to dial in optimal curing parameters for a wide range of inks and substrates. The Jetzone SE comprises a 5-foot infeed section, 10-foot heating chamber, 2-foot outfeed, and a 36" wide Fiberlon™ heat-resistant conveyor belt with a variable-speed belt drive for efficient automated curing.

Digital temperature and belt-speed displays streamline setups for repeat operations. Quartz lamp height in the optional preheat section is adjustable and adjustable chamber aperture panels ensure total control of the drying process and heat recirculation for maximum production efficiency.

Printers seeking precise operational control and maximum output from a graphics dryer while also taking advantage of an array of money-saving features should board the new American Jetzone SE and prepare for their profits to take off.
