FOR IMMEDIATE RELEASE

AWT WORLD TRADE DEBUTS NEW EQUINOX, A VERSATILE SINGLE-COLOR, MULTI-PALLET TEXTILE SCREEN PRINTER

Chicago, March 2019 — Building on a recent run of successful product launches and redesigns, AWT World Trade, Inc. is pleased to announce the new versatile, EQUINOX Single-color, Multi-pallet Textile Screen Printer for significantly improved production efficiency. Operators can unload and reload substrates while another is simultaneously printed, increasing production and realizing an output up to 800 pph.

The Equinox Textile Screen Printer produces a wide variety of textile products, including t-shirts, bags, towels, gloves, socks, and more. With the multi-pallet turntable feature, printers can achieve higher rates of production typically associated with automatic equipment while still benefiting from the Equinox's relatively compact footprint and lower price point.

The Equinox features an adjustable stroke length and a universal masterframe that holds most frames, including re-tensionable frames, and securely locks into place for proper registration and outstanding print repeatability. A motor-driven carriage ensures a smooth print stroke without any abrupt starts or stops.

The tool-free squeegee and floodbar pressure adjustment is standard, and AWT's patented Squeegeelizer™ assures uniform print pressure across the entire squeegee blade, delivering consistent tone throughout the image. Independent squeegee and floodbar locking angle adjustments, independent speed controls for the squeegee and floodbar, and AWT's patented quick-release Stay-Flat™ aluminum pallets are also standard on the newly designed Equinox Textile Printer.

Printing on a wider variety of textiles is a profitable and expanding market and adding a multi-pallet textile printer to your operation will increase your output, driving down costs and improving lead times. With the versatile, high-speed Equinox Textile Printer, screen printers can offer significantly more services and grow their customer base.
